Title: Frequency Shift Keying

Objectives:

1. To implement Frequency Shift Keying (FSK) digital modulation technique (transmitter)
2. To write a program for FSK in MATLAB

OUTCOME: analyze different band pass digital transmission and reception of signal

Draw Circuit Diagram:

Procedure:

- Assemble the circuit as shown in circuit diagram
- Apply digital modulating signal and analog carrier signals with given frequency and amplitude.
- Observe the FSK output on DSO and tabulate the readings.
- Draw the waveforms of modulating, carrier and FSK signal.
- Observe the waveforms of FSK on spectrum analyser.
- Write a program in MATLAB to observe the FSK waveforms.

Observation Table:

Modulating Signal		Carrier signal			BFSK Signal		
Amplitude	Frequency	Amplitude	Frequency1	Frequency2	Amplitude	Frequency for Logic 0 input	Frequency for Logic 1 input

Discussion/Conclusion:
