TITLE: Disk scheduling algorithms
Objective: Implementation of Disk scheduling algorithms - FCFS,SSTF,SCAN, CSCAN.
Outcome: Student can explore I/O systems, Storage structure and Unix system..

DESCRIPTION:

Disk scheduling algorithms manage how data is read from and written to a computer's hard disk. These algorithms help determine the order in which disk read and write requests are processed.
Disk scheduling is also known as I/O Scheduling.
The main goals of disk scheduling are to optimize the performance of disk operations, reduce the time it takes to access data and improve overall system efficiency.
Common disk scheduling methods include First-Come, First-Served (FCFS), Shortest Seek Time First (SSTF), SCAN, and C-SCAN.
