Title: Eye Pattern

Objectives:

1. To understand the effect of ISI on signal
2. To observe the effect of ISI using Eye Pattern with different roll off factors of filter and compare the results.

OUTCOME: analyze distortion less baseband transmission and reception of signal along with waveform coding techniques

Problem statement:

- Generate a string of message bit. Use the raised cosine pulse $p(t)$ as the shaping pulse and generate the corresponding baseband signal with a fixed bit duration (T_b). Use the roll-off factor as $\alpha = 0.4$
 - Use various roll off factors and plot the eye diagram in each case for the received signal. Make a comparison study among them.
 - Write a program in MATLAB or any open source tool.
- Expected output:**
- Eye diagram plots with different roll-off factors

Discussion/Conclusion:
